

UFHealth LEADERSHIP IN ACTION

SUMMER WORKSHOP FOR UF HEALTH SCIENCE CENTER GRADUATE STUDENTS & POSTDOCS

Regardless of your intended career pathway, today's health research predoctoral and postdoctoral trainees must be well rounded in a variety of leadership skills and abilities while defining career goals and action steps.

Through this four-week practical and interactive series, you will enhance your skills as a leader in the context of your career and professional development. Based on the social change model and design thinking, you will work with a network of faculty members and peers to develop into a well-rounded professional prepared for the health sciences research workforce, while learning how to translate your research training to be a positive force for change. A certificate of completion will be awarded for attending all four sessions. More info at:
